

Skin Signals: TCM Dermatology in Supporting Cancer Patients Across Diagnosis, Treatment, and Recovery

Dr. Alissa de Jongh

Dermatologic side effects of cancer and its treatments present complex challenges that extend beyond the surface. In this clinically grounded session, Dr. Alissa de Jongh explores how Traditional Chinese Medicine (TCM) dermatology provides a nuanced framework for understanding and supporting these conditions across the cancer continuum. Integrating case-informed insights, she examines the role of acupuncture, herbal medicine, and nutrition in addressing treatment-related skin concerns while supporting systemic regulation and patient resilience. Attendees will gain practical, integrative strategies and deeper clinical perspective for working collaboratively within oncology care.
