

# Laser Acupuncture in the Treatment of Dry Eye Syndrome

Wen-Long Hu

Wen-Long Hu gave a report entitled “Laser Acupuncture in the Treatment of Dry Eye Syndrome”. This 2-center randomized controlled trial combined laser acupuncture with conventional treatment to treat objective and subjective dry eye symptoms. The results showed that laser acupuncture with conventional treatment improved tear film stability more than conventional treatment alone. We feel our study contributes to the literature because all dry eye indicators improved in the experimental group and ocular surface disease index and tear-film breakup time considerably improved compared to the control group. These findings may identify patients who would benefit from laser acupuncture.
